

**ABSTRACT**

A display device for a vehicle comprises an instrument for a vehicle (1), which includes a plate having a surface on which characters are provided (8), an indicating needle (7) rotatably disposed along a surface of the plate (8), and a transparent cover (25) disposed in a surface side of the plate (8) separately from the plate (8), and a small display portion (35) is disposed in a portion of the transparent cover (25) to be a floating state to the plate (8), and a new visual effect having a stereoscopic feeling can be obtained because the small display portion (35) can be seen as the floating state to the surface of the plate (8).
